

Russian River Salmon and Steelhead Monitoring Program Field Internships

Fall application deadline: June 19th 2020

About the Program

Located in Windsor, Sonoma County, we monitor native salmon and steelhead at all life stages and work closely with partners to support salmonid recovery efforts throughout the Russian River basin. Fall field work includes electrofishing, habitat assessments, GIS field mapping, streamflow monitoring, and operating PIT-tag detection equipment.

Qualifications and Requirements

Interns will work directly with biologists to collect scientific data in the field. Applicants should be interested in fish monitoring, natural resource management, or a related field. Interns are required to hike long distances in the stream channel while carrying survey equipment. Position runs late-August through late-October and a minimum of 2 full workdays per week is required. Internship is non-compensated, but college credit is available.

To Apply

Send cover letter and resume to Sarah Nossaman at snossamanpierce@ucsd.edu

COVID-19 Information

Safety is our priority. We are following state-mandated shelter-in-place orders and it is not clear when field work will resume. Interviews will be conducted via phone or video call, and internship start dates are subject to change.
